With Co-Op the brain is in the first printer

Evolabel Co-Op

First time ever in a four-printer collaboration set-up.

Production Management Solutions from CodeIT

**Print & Apply Technologies
are part of the
CodeIT Enterprise™ Ecosystem**

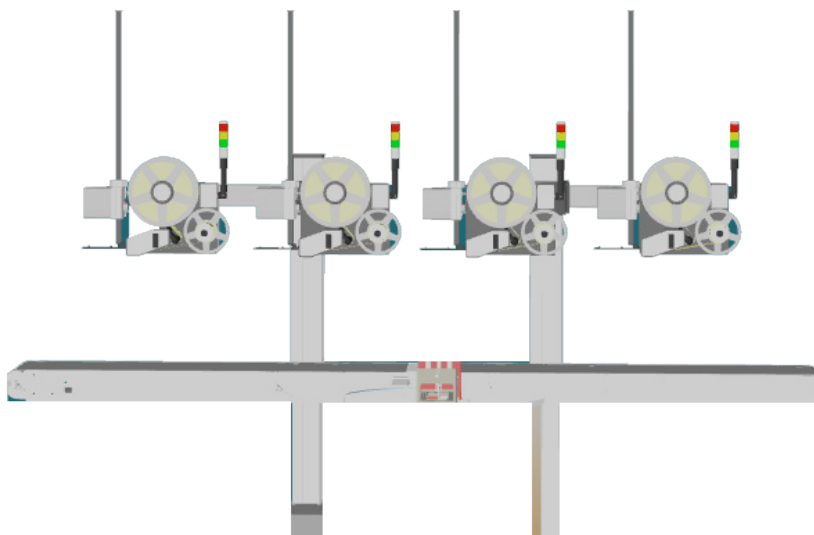

Evolabel Cooperative Mode, Co-Op, is a unique concept where a group of up to four printers communicate and work together for scalable capacity and redundancy without additional hardware or software. Co-Op is the perfect print & apply solution for any application that requires high capacity. Additionally, Co-Op is an excellent match for logistics applications with different package heights, package types, and unique label information. On the CodeIT stand at Scanpack October 22-25 it is demonstrated for the first time in a four- printer collaboration set-up.

The innovative software adapts to the host control system and not the other way around. It allows for a new way to unlock the potential of your labeling system. The core of the solution is the principle of collaboration. The printers

in a Co-Op group communicate with each other and schedule each print job, in real time, to the printer that is most suited for the task – in other words, the printers share the workload. This way the time for operators to change labels and maintenance is maximized even if one printer is offline, while simultaneously upholding the required throughput. The result is a scalable labeling solution that reduces operator stress, while maximizing uptime and throughput, without requiring any external hardware or software.

“With Co-Op, we have taken complex challenges and made them into a simple and intelligent solution. Designed to optimize production achieving smooth, fast and secure workflow. Eliminating pain-points frequently found in production where many conventional labeling systems tend to limit the throughput”, says Henrik Bohre, Head of Evolabel R&D.

The Co-Op group is controlled by one main printer. No changes in the host system are required when new printers are added as the designated Co-Op main printer is the single point of contact for the host system. All additional printers are directly controlled by the main printer, and it will handle the rest of the "line control" by itself.

Evolabel Co-Op in a four-printer collaboration set-up.

Simplicity through technology

Evolabel develops, manufactures and supplies innovative and intuitive machines for automatic labeling in production or warehousing around the globe. We take complex challenges and turn them into simple and intelligent solutions - **Simplicity through technology** is our philosophy, every step of the way. For questions or more information please contact Head of Marketing, Helena Crivei – helena.crivei@evolabel.com, +46 765 293 572.

CodeIT is the official partner of Evolabel in Norway, Sweden and Vietnam. We are a leading provider of innovative data management solutions and consultancy services. The Group's unique, multi-disciplined team has extensive experience with digitalization and critical business applications. We design, develop and deliver industrial software solutions and better ways to leverage data, generate value, and drive growth. Our team is trusted and relied on by forward-thinking companies in various industries worldwide.
